City of Grand Rapids

Small and Micro Cell Wireless Facilities Sites

Radio Frequency (RF) Power Density Measurements

Executive Summary:

Geotech, Inc. performed broadband power density measurements of existing small and micro cell sites to determine compliance or non-compliance with the existing requirements for the general public as set by the Federal Communications Commission (FCC) and other international agencies. As of August 23, 2019, seventy-one (71) sites were tested, and the measurements of the maximum power density were less than six (6) percent of the Maximum Permissible Exposure (MPE) limit as set by the FCC.

Objective:

Perform small and micro cell radio frequency testing to determine compliance or non-compliance of the Maximum Permissible Exposure (MPE) power densities with the applicable requirements as set by the Federal Communications Commission (FCC) and other international agencies.

Testing shall be performed for existing installations, and repeated every 3-years. New installation shall be tested on a yearly basis and repeated every 3-years.

Background Information:

1. Number of cell sites: As of this date, there are 121 existing and proposed sites. 71 sites were active and tested.
2. Several types of radio/antenna/pole installations have been installed and/or are proposed. The known radio frequencies of the small/micro cells range from 800 megahertz (MHz) to 6 gigahertz (GHz).
3. The following service providers have, or propose to have small/micro cells within the City limits: Verizon, AT&T, Sprint. (These sites are operated by ACD, Mobilitie, and Zayo).
4. The Federal Communications Commission (FCC) regulates and allocates the radio frequencies. The Institute of Electrical and Electronic Engineers (IEEE) has developed Standard 95.1; which was adopted by the FCC. Similar standards were developed by other agencies; which included the International Commission on Non-Ionizing Radiation

Protection (ICNIRP) and Canada Code 6. These standards define the limits for Maximum Permissible Exposure (MPE) Power Densities (in Watts/Meter Squared) as follows:

	<u>FCC</u> <u>(1.5-100GHz)</u>	<u>INCIRP</u> <u>(2-300GHz)</u>	<u>Canada</u> <u>(6-150GHz)</u>
Occupational	50	50	50
Non-Occupational (General Public)	10	10	10

5. Because the atmosphere is flooded with nearly unlimited radio transmissions from various sources, it may in some cases be difficult to distinguish between existing radiation levels and new small/micro cell radiation levels. Based on these factors, it was decided to perform broadband power density measurements to account for the frequencies ranging from 300KHz to 50GHz; which includes the operating frequencies for the small/micro cells. These measurements identify the existing power densities, and determine compliance or non-compliance with the FCC standards.
6. Ground level Safety: Radio frequency emissions from antennae used for cellular transmissions result in exposure levels on the ground that are typically below the safety limits which were adopted by the FCC based on the recommendations of expert organizations, and endorsed by agencies of the Federal Government responsible for health and safety.

Testing Procedures and Parameters:

1. Test Instrument: Narda NBM-550-S with FCC probe #EA5091
2. Measurements were made at:
 - a. Eighteen (18) inches and at ten (10) feet away and in-line with the cells. (The measurements at eighteen inches were discontinued during the course of the testing after learning that these tests were not necessary since the readings were expected to be high due to the close proximity to the cells.
 - b. Six (6) feet above ground at distances of 10 feet, 50 feet and 100 feet away from the pole/cell base
 - c. The banner arms
3. Measurements were broadband base and account for radio frequencies ranging from 300KHz to 50GHz
4. Measurements recorded the maximum readings as a percentage of the Maximum Permissible Exposure (MPE) power densities for occupational permissible limit. These measurements were converted to non-occupational (general public) power densities, and were compared with its MPE limit. Note: the MPE for non-occupational (general public) permissible limit is lower by a factor of 5 in comparison with the occupational permissible limit.

Testing Results: Refer to:

1. Attachment #1 – Summary of Radio Frequency (RF) Power Density Testing – Non-Occupational
2. Attachment #2 – Radio Frequency (RF) Power Density Testing - Non-Occupational
3. Attachment #3 – Radio Frequency (RF) Power Density Testing - Occupational and Non-Occupational

Conclusions:

1. The exposure levels in the vicinity of the cells are high, and the cells shall be turned off whenever work is to be performed on the lighting luminaires located on the poles.
2. The exposure of the general public to radio frequency power densities at six (6) feet above ground is less than six (6) percent of the Maximum Permissible Exposure set by the FCC.
3. The exposure to radio frequency power densities at the top banner arms is less than thirteen (13) percent of the Maximum Permissible Exposure set by the FCC.

Summary of Radio Frequency (RF) Power Density Testing - Non-Occupational											
					5.2450	5.3900	5.5900		5.5000	5.0100	5.3150
					0.0800	0.0000	0.0000		0.0800	0.0550	0.0000
					0.9850	1.3250	1.3800		1.4150	1.1950	1.3250
					1.6531	1.8288	1.9618		1.7473	1.6070	1.5706
Notes:											
1. For a complete description of testing procedures, parameters and results-see Full Report											
2. All values presented as a percentage of 10 watt/meter squared for non-occupational maximum permissible exposure											
3. Direction refers to measurement parallel to street direction											
4. Measurement at 6 feet above ground represents pedestrian height											
5. Above measurements are for active sites as of 8-23-2019

Radio Frequency (RF) Power Density Testing - Non-Occupational						
Max	5.2450	5.3900	5.5900		5.5000	5.3150
Min	0.0800	0.0000	0.0000		0.0800	0.0000
Median	0.9850	1.3250	1.3800		1.4150	1.3250
Average	1.6531	1.8288	1.9618		1.7473	1.5706

- Notes:
- All values presented as a percentage of 10 watt/meter squared for non-occupational maximum permissible exposure
 - Direction refers to measurement parallel to street direction
 - Measurement at 6 feet above ground represents pedestrian height
 - Above measurements are for active sites as of 8-23-2019

Attachment #3 - Radio Frequency (RF) Power Density Testing - Occupational & Non-Occupational

City of Grand Rapids/Small Cell Wireless Facilities Radio Frequency (RF) Power Density Testing - Occupational & Non-Occupational

Count	OBJECT ID	Small Cell	Pole Owner	Site ID	Site Status	Approved Date	Address	Results as Percentage (% of 50 Watts/Meter Squared) of Maximum Permissible Exposure (MPE) for FCC Occupational Limits															
								Measurements at Horizontal Plane with Cell								Measurements at 6 feet above Ground

Notes:

- The values are presented as a percentage of 50 watt/meter squared for occupational maximum permissible exposure and 10 watt/meter squared for non-occupational maximum permissible exposure
- Direction refers to measurement parallel to street direction
- Measurement at 6 feet above ground represents pedestrian height
- Above measurements are for active sites as of 8-23-2019

Measurement Parameters			
Instrument: Narda NBM-550-S with FCC probe #EA5091			
Measurements made at 6 feet above ground at 10 feet, 50 feet and 100 feet from the pole/cell base			
Measurements are broadband base and account for radio frequencies ranging from 300KHz to 50GHz			
Maximum Permissible Exposure (MPE) Power Densities in Watts/Meter Squared			
	FCC (1.5-100GHz)	INCIRP (2-300GHz)	Canada (6-150GHz)
Occupational	50	50	50
General Public	10	10	10
